

## Press release

### AVAT supports Tübingen non-profit organizations and projects with donation

Tübingen, March 30, 2017 – Yesterday morning, Frank Ganssloser, CEO of AVAT Automation GmbH, handed over the donations with a total value of 6,000 euros to the representatives of the three non-profit organizations. According to the motto "Helping other people", the global customers were asked to vote in the context of the Christmas and New Year greetings, which regional non-profit organizations should be supported in their sense this year. "I am very pleased to support, also on behalf of our customers, the Kinderschutzbund Ortsverein Tübingen, the Tübingen Tafel and the Tübingen project ROCK YOUR LIFE!" commented the owner of the Tübingen-based technology company. He hopes that this action will encourage further companies to assume regional social responsibility.

#### Background informations:

##### **Deutscher Kinderschutzbund Ortsverein Tübingen e.V.**

We help the "Tübingen Child Protection Association" to finance the "Welcome to Life" program. This concerns the care of newborn babies who are born in a problematic environment.

##### **Tübinger Tafel e.V.**

Many foodstuffs are thrown away, while more than 6,000 citizens of Tübingen are dependent on social assistance. We are supporting the Tübinger Tafel e.V. with a donation for the procurement of food.

##### **ROCK YOUR LIFE! Tübingen**

Sustainable effects for pupils, students, companies and society as a whole. We envision and work towards a society in which educational opportunities are irrespective of the social milieu and where social mobility.

## About AVAT

Avat Automation is an independent, medium-sized company and has been one of the highly specialized engineering partners for large engine manufacturers, plant engineering, service providers, energy suppliers and operators of decentralized energy systems for more than 25 years. More than 80 highly qualified employees work as interdisciplinary teams in areas of engine management systems for gas engines and automation for supply and process engineering. Covering the entire spectrum of hardware, software and services, we leverage this range of services to meet the complex customer requirements for energy automation – from individual parts to holistic solutions. With a newly opened office in Korea, the Tübingen-based technology company is now also active in the Asian region.
